

wherein n=1, 2, 3, and 4, and

R<sub>1</sub> includes hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, and substituted phenyl; R<sub>2</sub> includes hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, substituted phenyl, alkylene, phenylene, substituted alkylene, and substituted phenylene, and R<sub>3</sub> includes alkylene, phenylene, substituted alkylene, or substituted phenylene, and

Al  
CMT

wherein  $R_4$ ,  $R_5$ , and  $R_6$  individually include alkylene, phenylene, substituted alkylene, or substituted phenylene, and  $R_7$ ,  $R_8$  and  $R_9$  individually include hydrogen, hydrocarbyl, phenyl, methoxyphenyl, alkylphenyl, substituted alkyl, and substituted phenyl.

2. (Amended) The gel composition of claim 1, further comprising a diblock copolymer.

Sub  
C3

25. (Amended) A method of making a gel composition, comprising:  
mixing an ester compound with a polymer compound selected from the group consisting of triblock copolymers, star polymers, radial polymers, multi-block copolymers, and combinations thereof,

Ag

heating the mixture;

agitating the mixture until the mixture becomes homogeneous; and

cooling the mixture,

wherein the gel composition is substantially free of mineral oils,

wherein the ester is represented by one of the following formulas:
